Updates on using tech for peacebuilding & peacekeeping

Promoting Peace, Trust and Security in Cyberspace at the United Nations

ICT4Peace's Daniel Stauffacher was invited on 4 and 5 May 2015 to address the United Nations member states in Geneva, where he called again for the Use of Information and Communication Technologies (ICTs) for peaceful purposes. In particular, he stressed that ICTs be used to improve early warning of potential conflicts, mitigate their impact, and promote reconciliation and non-violent means of resolving disputes between and within nations. He warned that ICTs are increasingly being used for purposes detrimental to peace and security, including attacks on digital networks and systems. Noting that traditional and social media can be used to promote disharmony and conflict between social, political and ethnic groups, Stauffacher demanded that norms of responsible behaviour and confidence building measures (CBMs) for cyberspace be urgently developed by the world community.

ENTRi certified course on new media in crisis information management

For the second consecutive year, the ICT4Peace Foundation's Special Advisor Sanjana Hattotuwa led the training of a new and unique ENTRi course on the use of new media for crisis management. The course was held from 18 - 22 May at the European Academy Grunewald in Berlin, Germany.

The training was conducted in collaboration with the renowned Zentrum für Internationale Friedenseinsätze gGmbH (ZIF), based in Berlin, and introduced 24 participants from a range of backgrounds to a variety of new media tools and platforms used in the collection, presentation, verification, and dissemination of information.

Participants used several leading web based tools, apps and services as part of interactive activities and group work, while learning about digital communications security as well in order to protect information and sources.

ICT4Peace consultations with the Federal Foreign Office of Germany, Berlin

On 23 April 2015, ICT4Peace was invited by the German Federal Foreign Office to discuss international cybersecurity affairs and to give a presentation on the

Reinventing How We Live Together

From Occupy to Podemos to #IllRideWithYou, initiatives for change and civic engagement are increasingly happening outside of established institutions. By leveraging technologies that amplify people's voices, these new initiatives are more inclusive, more dynamic, and more meaningful on the ground. We see the links between civic engagement and peacebuilding, including the positive function technology can play by broadening avenues for discourse. It is our view that this new paradigm for peacebuilding is parallel to this new paradigm for civic engagement. While many challenges remain, technology enables this paradigm shift, even if it does not necessarily cause it.

UN General Assembly and UN Secretary General take important steps to improve Crisis Information Management

The UN General Assembly in December 2014 approved the UN Secretary-General's Strategy, to better exploit the enormous potential of Information and Communications Technologies (ICT) for decision-making and delivery capacity of the United Nations in the areas of peace

of the UN Information Management Working Group (IMWG), the ICRC's Tarun Sarwal and Gulheim Ravier and finally with key staff from the Office of the High Commissioner on Human Rights (OHCHR) on issues anchored to crisis information management (CiM), human rights, innovation, governance and technology development in support of, inter alia, humanitarian aid, civilian protection and peacekeeping.

and security, humanitarian operations and development, human rights and international law. The strategy is contained in the SG's report of 10 October 2014 on Information and Communication Technology in the United Nations (A/69/517).

The ASG UN Chief Information and Communication Technology Officer (UN CITO) Ms. Atefeh Riazi and her Office are responsible for the implementation of the Secretary General's strategy.

The ICT4Peace Foundation, with the financial support of the Governments of Switzerland, Sweden and private Foundations is honoured to have been supporting since 2008 the UN CITO and UN Organisations such as OCHA, DPKO/DFS, UNHCR, OHCHR, WFP, UNICEF, UNDP etc. to improve the UN Crisis Information Management System (CiMS).

framework, situational awareness and information exchange around human rights within the UN family, as well as bringing into the UN architectures information from the public domain - in line with the thrust of the UN HRUF initiative.

Sanjana presented an overview of some of the ways through which ICTs, in the broadest sense, had already impacted the domain of human rights protection and monitoring. After the presentation, there was discussion around the very aspects and issues the ICT4Peace Foundation has been engaged with as part of the UN's Crisis Information Management strategy, since 2008. Questions around verification (generating actionable intelligence from the tsunami of unverified information in the public domain), the challenges around managing big data, how to overcome institutional mandates through the use of technology, forward thinking governance mechanisms as well as more technical and technological queries came up. One participant said that in response to a question raised on the first day (what do communities do when the UN isn't around to strengthen civilian protection and human rights) the ICT4Peace Foundation's presentation provided the answers, in terms of the ICTs already used by varied stakeholders engaged in work allied with OHCHR.

ICT4Peace is a policy and action-oriented international Foundation. Our purpose is to save lives and protect human dignity through Information and Communication Technology.

We promote cybersecurity and a peaceful cyberspace through international negotiations with governments, companies and non-state actors. We also explore and champion the use of ICTs and media for crisis management, humanitarian aid and peace building.

Download **a report on the use of Information and Communications Technologies for peacebuilding (ICT4Peace)**, with a Preface by Kofi A. Annan, former Secretary General of the United Nations [here](#). An updated version of this report, with critical analysis on current policies and practices of ICTs in peacebuilding and crises was published in early 2011. Published in collaboration with the Berkman Center for Internet and Society at Harvard University and GeorgiaTech, **Peacebuilding in the Information Age: Sifting Hype from Reality** can be read [here](#).

ICT4Peace took root with pioneering research on the role of ICTs in preventing, responding to and recovering from conflict in 2003 and lead to the adoption of Paragraph 36 by the World Summit on the Information Society (WSIS) in Tunis in 2005 which recognises “...*the potential of ICTs to promote peace and to prevent conflict which, inter alia, negatively affects achieving development goals. ICTs can be used for identifying conflict situations through early-warning systems preventing conflicts, promoting their peaceful resolution, supporting humanitarian action, including protection of civilians in armed conflicts, facilitating peacekeeping missions, and assisting post conflict*

peace-building and reconstruction".

The **ICT4Peace Foundation** works to promote the practical realisation of Paragraph 36 and looks at the role of ICT in crisis management, covering aspects of early warning and conflict prevention, peace mediation, peacekeeping, peace-building as well as natural disaster management and humanitarian operations.
