

The questions discussed by Panel Session IV: Cyber Security: Strengthening Mutual Cooperation

1. What are at present the most important threats to Cyber Peace ?
2. Cyberspace as a Fifth Domain. What is meant by that ? What is the role of Militaries in protecting their respective cyberspace from malicious cyber actors, in the context of overall national cybersecurity strategies ? Is this concept discussed with and accepted by civil society, for instance ?
2. As one of the new cyber threats the “interference with democratic processes from abroad” was mentioned. Is this part of cybersecurity ? Who should handle this nationally and internationally and in which fora ? What countermeasures, if any, are being deployed. What is their legal status ?
3. What could be the role of business and academia (inter alia technology research in AI, block chain etc.) in partnering with Governments, including Military, to build a safe and secure, open and free cyberspace ? In particular also with view of the 4th Technological Revolution ?
4. What kind of cooperation among stakeholders can and should be achieved in the short and medium term to build a safe and secure, open and free cyberspace ?
